INSTALLATION INSTRUCTIONS

Electrical products can cause death, injury, or property damage.
Maintenance and installation should only be carried out
by a professional electrician.

CORE SAFETY CHECKLIST

- **Turn off the power:**
  Shut off the electricity at the main circuit breaker, not just at the wall switch.
- **Verify with a tester:**
  Use a non-contact voltage tester to ensure the rail is completely dead before touching it.
- **Handle with care:**
  Ensure your hands and tools are completely dry before beginning the installation.
- **Follow alignment markings:**
  Insert the accessories according to the track's polarity guide (usually a groove or line) to avoid shorting the system when turned back on.
